Does temporal language depend on spatial language? Many parallels between spatial and temporal expressions, and many examples of metaphorical processes, seem to prove this. But how are expressions such as before and after, in front and behind actually used in natural discourse - does their application reflect a conceptual dependency relation? The book addresses this question from an innovative perspective, drawing together earlier findings from various directions and supplementing them by empirical investigations. Gradually a new picture emerges: The concepts of space and time are represented in language usage in various systematic ways, reflecting how we understand the world - and at the same time reflecting how our concepts of space and time differ fundamentally. The book is concerned with Vantage Theory (VT), a model of categorization proposed by the American linguist, anthropologist, and cognitive scientist, Robert E. MacLaury (1944-2004). It consists of three of his previously unpublished studies and five chapters by other authors.

Vantage Theory views categorization as a process of vantage (point of view) construction by analogy to the way humans orient themselves in space-time. Originating in the domain of color, the theory was extended to cover other aspects of cognition and language. The chapters authored by MacLaury introduce the model, discuss the details of the analogy between space-time and categorization, and present four case studies. The remaining chapters present an overview of the existing literature on VT, locate the model against the broader background of psychological and cognitive research, and propose its application to novel data. The premise of this book is that a shift of vantage will help elucidate various important issues of law related to judging, to bills of rights and to more abstract questions of legal philosophy. The work begins by focussing on the jurisprudential issue of whether it is desirable to keep separate the demands of law and of morality and uses the device of changing vantages to elucidate the many issues that fall under that aegis. This is followed by a consideration of how judges ought to do their job when interpreting and whether the rule of law ideal differs from rule by judges. The last part of the book focuses explicitly on bills of rights. Building on the earlier parts, the author uses his device of shifting vantages to provide insights into how these instruments affect democratic decision-making and from which perspectives they will look attractive and unattractive. Written in a clear, accessible and engaging style, the book demonstrates that vantage point is a key criterion affecting how one understands and evaluates, firstly, some of the theoretical debates in jurisprudence and then, secondly, what judges are doing and whether a bill of rights is desirable or not.

The 51 papers included in this volume were organized in topical sections on interactions in public, urban and rural contexts; UX design for health and well-being; DUXU for creativity, learning and collaboration; DUXU for culture and tourism. This book discusses digital learning opportunities in higher education for refugees with different educational, social, cultural and linguistic backgrounds. Based on findings from practical studies and research projects from several countries, the book highlights the numerous challenges when it comes to the successful integration of refugees into higher education. These challenges arise at both the individual and the institutional level. The contributions included in this book show how these challenges can be effectively met using digital teaching-learning platforms. The work thus offers a comprehensive insight into the opportunities online-based learning platforms offer regarding the successful integration of refugees into higher education Overall, the research presented in this volume is relevant for political stakeholders, university practitioners in the field of migration research, university research, and online and digital learning. This book discusses the increase in number and capacity of wind farms in Germany and how this is affecting birds of prey. Several methods are used to study the behaviour of birds of prey in relation to wind farms, including telemetry data, field observations, and comparisons of turbine base areas. Special attention is given to the effects on different bird species and the impact wind farms may have on population growth and breeding success of birds of prey. Chapter 6 discusses the collision risks at wind turbines and provides an analysis of the fatalities. In the concluding chapter, ideas are put forward to help minimize conflicts, estimate risks, and offer practical recommendations for future research. This book will be of interest to wind farm developers, researchers, applied ecologists and landscape planners. A technical guide to performing systematic experiments that create more transparency for corporate surveillance and its algorithms.

Handbook of Service User Involvement in Mental Health Research In recent years, the need for patient and public involvement in medical research has been accepted around the world. Patient groups are gaining power and demanding their right to influence the direction of research, while funding bodies are increasingly regarding patient involvement as a requirement for grant applications. However, current knowledge on how to involve service users in mental health research is sparse and dispersed. This book provides clear guidance on best practice in this area, with practical advice based on experience in countries around the world. Handbook of Service User Involvement in Mental Health Research describes the background and principles underlying the concept of service user involvement in mental health research; it provides relevant practical advice on how to engage with service users and how to build and maintain research collaboration on a professional level. The book highlights common practical problems in service user involvement, suggesting ways to avoid pitfalls and common difficulties. Combines the theoretical aspects of service user involvement in research with specific examples, as well as with general practical guidelines Represents the views of service users, in a powerful combination with the views of other mental health professionals Considers the different perspectives and needs of the stakeholders concerned Includes a step by step guide on best practice in successful service user involvement. Handbook of Service User Involvement in Mental Health Research is written for psychiatrists and other medical professionals managing people with psychiatric disorders, as well as for researchers in the mental health field who want to develop projects with service user involvement. It is vital reading for funding bodies requesting service user involvement, and - importantly - is written for those service users who are interested in becoming involved in research. Clients have been identified as critical for building delivery but have been under-researched with only a few studies about them. This book seeks to address this gap. A deeper look into the nature of construction clients and their relation to building users exposes more fundamental questions related to the activity of building and the activity in the building. These fundamental questions include 'How do clients get what they want?', 'How do clients cope with the building process?', and 'How are clients being shaped by building(s)?'. This book on clients and users is structured around three main themes: Agency is concerned with the classical agency/structure dichotomy on actions, roles and responsibilities or, put differently, whether actors can act freely or are bound by structural constraints. Governance is related to the interplay between clients and the supply system: clients govern the supply system but are at the same time governed by the supply system through different processes and mechanisms. Innovation deals with construction innovation and what part clients and users play in this struggle between change and stability. The book includes theoretical and conceptual frameworks on what constitutes clients and users as well as case studies on R&D themes of relevance to practice.
