Case Studies in Forensic Psychology Sep 28 2022 Case Studies in Forensic Psychology offers the reader a unique insight into the often-hidden world of psychological assessment and intervention with people who have committed serious crimes. The book contains a breadth of forensic case studies, and each chapter details the real forensic work that psychologists do in their clinical practice in prison, psychiatric, and community settings. Assessment and therapeutic approaches used in each case study are discussed, as well as the state of the literature in each area (e.g. sexual violence risk assessment, schema therapy). Each chapter will take the reader through a variety of

offender profiles, their personal background, any relevant psychiatric or psychological diagnoses, and assessments and/or treatment completed. Case studies offer valuable insight into the clinical practice and day-to-day role of a forensic psychologist, demonstrating the work undertaken that empirical research does not offer. Uniquely, *Case Studies in Forensic Psychology* brings together treatment models and forensic research, demonstrating how theory translates into practice and considering whether it is effective at an individual level. It is ideal for students of forensic psychology and forensic mental health, as well as practitioners at any stage of their career in this rapidly expanding field.

**Animal Maltreatment** Jan 27 2020 Animal maltreatment includes physical or sexual abuse, neglect, or hoarding of animals, and all states have laws prohibiting various forms of animal maltreatment. About one-half have statutory provisions mandating or allowing courts to order forensic mental health assessments of individuals convicted of animal maltreatment offenses. Yet there are few resources on this topic for mental health and legal professionals and none that offer guidance for evaluations in animal maltreatment cases. *Animal Maltreatment* is the first book to provide an overview of animal maltreatment as a legal, clinical, and forensic issue. It offers guidance for mental health and legal professionals involved in the adjudication of animal maltreatment offenses, with a special focus on forensic mental health assessments in such cases. The book reviews the legal and social contexts of animal maltreatment and then describes research-based and clinical knowledge within the area. It offers perspectives on social and clinical responses in animal maltreatment cases and describes prospects for an area of forensic mental health assessment focused specifically on the forensic evaluation in cases of animal maltreatment. This is the first book that brings together descriptions of the characteristics of those who maltreat animals, factors associated with animal maltreatment behaviors, information about the impact on the animals themselves, and evaluations of offenders to assist courts in decisions about their rehabilitation. *Animal Maltreatment* will be of great benefit and interest to general and forensic psychologists, psychiatrists, and social workers, as well as lawyers, legal scholars and students, veterinarians, humane law enforcement professionals, and others involved in animal welfare advocacy.
