Visible Thinking Sep 16 2021 Causal mapping is a tool that enables you to make sense of challenging situations so that you can get more out of them. A causal map is a word and arrow diagram in which ideas and actions are causally linked with one another through the use of arrows. Typically, only specialists such as physical or social scientists and operations researchers know about causal mapping and the tool is therefore not widely known or its broad applicability understood. Until now there has been no guidance available on how to make use of the tool for more general purposes. This book lets managers understand the theory and practice of causal mapping in layman's terms for use in both individual and group settings. It shows managers how to develop and use action-oriented strategy maps and logic models in business decision making. The authors show how causal mapping can be used as a tool to make sense of challenging situations and develop effective business responses.

Treasure Map Aug 04 2020 Matthew has found a treasure map, and soon the Elm Street Kids' Club is off on a quest. The map guides them into a wonderful, magical world, but it's the real-life math skills of understanding distance, scale, direction, and symbols that will help Matthew, Sheri, Meg, Danny, and Jed -- with some assistance from Petey the parrot -- find a treasure hidden fifty years ago.

Maps, Myths, and Men Dec 20 2021 The "Vínland Map" first surfaced on the antiquarian market in 1957 and the map's authenticity has been hotly debated ever since—in controversies ranging from the anomalous composition of the ink and the map's lack of provenance to a plethora of historical and cartographical riddles. Maps, Myths, and Men is the first work to address the full range of this debate. Focusing closely on what the map in fact shows, the book contains a critique of the 1965 work *The Vinland Map and the Tartar*

Relation; scrutinizes the marketing strategies used in 1957; and covers many aspects of the map that demonstrate it is a modern fake, such as literary evidence and several scientific ink analyses performed between 1967 and 2002. The author explains a number of the riddles and provides evidence for both the identity of the mapmaker and the source of the parchment used, and she applies current knowledge of medieval Norse culture and exploration to counter widespread misinformation about Norse voyages to North America and about the Norse world picture.

The Map Book Feb 07 2021 Chronicles the historical development of maps and mapping from the Bronze Age to the present, collecting some 175 maps spanning ten millennia that represent the progress of civilization and technology, from military plans that depict enemy positions, to the famed London Underground layout, to the digitally enhanced renderings of today.

Idea Mapping Jan 21 2022 Praise for Idea Mapping "Nast's work in Idea Mapping enables those with creative minds to clearly lay out their thinking process and those who are more process-minded to become creative. If your organization is looking for a pragmatic, step-by-step guide to idea mapping, this is it." --Chris Brown, Executive Vice President, DTE Energy Resources "I have used idea maps for thirty years and have taught MBA students, employees, and my children how to harness their power. I strongly recommend this book and believe you will feel it to be one of the best investments you have ever made in your own growth."

--Stephen C. Lundin, coauthor, FISH! "This is a book that everyone should read. It's an interactive, thought-provoking book about the brain and learning that will expand your mind. Nast, an accomplished and well-respected instructor, has guided me into a new realm of learning experiences and possibilities. I'm sure you will feel the same upon reading her insightful work." --Simon Tai, CEO, Buzan Centre Taiwan and S&J Media Intergration Co. Ltd., Host of News Discovery on NEWS 98 Taiwan "Nast shows you a revolutionary method to capture your thinking processes. Don't underestimate the simplicity of idea mapping because therein lies its genius." --Scott Hagwood, four-time USA Memory Champion, author, Memory Power "The ability to visually capture and organize thoughts and ideas has enabled millions of people around the world to do their work with greater creativity and productivity, run their businesses more strategically, and manage complex projects more efficiently--even map out a sales process or new product roll-out. Nast's very practical, readable book will get you quickly up to speed on one of the simplest but most powerful ways to organize your ideas, your work, and yourself." --Mike Jetter, cofounder and CTO, Mindjet Corporation, coauthor, The Cancer Code "The principles Nast writes about in Idea Mapping have become a staple for me over the past fourteen years. I was turned onto the concept of idea mapping in 1992 and have been a student and practitioner ever since. This has absolutely transformed the way I learn, design learning, and prepare for public speaking. I have never been more confident in my recall, knowing the content is nicely tucked away in my brain as it was designed to be. Get ready for a life-changing experience for yourself and those you influence." --Will Flora, Senior Manager, Chick-Fil-A University, Atlanta, GA

Maps for Lost Lovers Jul 27 2022 Set in a nameless British town that its Pakistani-born

immigrants have renamed Dasht-e-Tanhaii, the Desert of Solitude, Maps for Lost Lovers is an exploration of cultural tension and religious bigotry played out in the personal breakdown of a single family. As the book begins, Jugnu and Chanda, whose love is both passionate and illicit, have disappeared from their home. Rumours about their disappearance abound, but five months pass before anything certain is known. Finally, on a snow-covered January morning, Chanda's brothers are arrested for the murder of their sister and Jugnu. Maps for Lost Lovers traces the year following Jugnu and Chanda's disappearance. Seen principally through the eyes of Jugnu's brother Shamas, the cultured, poetic director of the local Community Relations Council and Commission for Racial Equality, and his wife Kaukab, mother of three increasingly estranged children and devout daughter of a Muslim cleric, the event marks the beginning of the unravelling of all that is sacred to them. It fills Shamas's own house and life with grief and, in exploring the lovers' disappearance and its aftermath, Nadeem Aslam discloses a legacy of miscomprehension and regret not only for Shamas and Kaukab but for their children and neighbours as well. An intimate portrait of a community searingly damaged by traditions, this is a densely imagined, beautiful and deeply troubling book written in heightened prose saturated with imagery. It casts a deep gaze on themes as timeless as love, nationalism and religion, while meditating on how these forces drive us apart.

You Are Here Nov 30 2022 Mapmaking fulfills one of our most ancient and deepseated desires: understanding the world around us and our place in it. But maps need not just show continents and oceans: there are maps to heaven and hell; to happiness and despair; maps of moods, matrimony, and mythological places. There are maps to popular culture, from Gulliver's Island to Gilligan's Island. There are speculative maps of the world before it was known, and maps to secret places known only to the mapmaker. Artists' maps show another kind of uncharted realm: the imagination. What all these maps have in common is their creators' willingness to venture beyond the boundaries of geography or convention. You Are Here is a wide-ranging collection of such superbly inventive maps. These are charts of places you're not expected to find, but a voyage you take in your mind: an exploration of the ideal country estate from a dog's perspective; a guide to buried treasure on Skeleton Island; a trip down the road to success; or the world as imagined by an inmate of a mental institution. With over 100 maps from artists, cartographers, and explorers, You are Here gives the reader a breath-taking view of worlds, both real and imaginary.

Mapping the Silk Road Jan 01 2023 Mapping Asia presents an authoritative selection of the most important antique maps of Asia representing time periods from the age of Alexander the Great to the early nineteenth century, and spanning the area from the Middle East to Japan. A visual chronicle of the maps and their makers, this book presents historic documents by cartographers from England, France, Portugal, Holland, Turkey, Italy, and China. It explores the history of Europe's discovery of lands to the east, from Constantinople to present-

day Alaska. In doing so the book tells the story of the thriving trade that linked east and west beginning with the ancient Silk Road, examines the role of the explorers - such as Vasco da Gama, Magellan and Sir Francis Drake - as they overcame enormous difficulties to discover new lands and routes to the East, and contrasts this history with the struggles of indigenous peoples to retain their autonomy in the face of European trade, missionary activity, and influence. This volume reproduces in full color 80 beautifully rendered and rare maps, more than 40 of which have never been published for the general public. Each map is accompanied by an essay that provides extensive background on the mapmaker and his work, with descriptions of the geography and sites. The decoration of the maps reflects artistic styles of their day, including calligraphy, cartouches, and details such as camel caravans making their way across the Silk Road, galleons navigating sea routes to Asia, illustrations of native plants and animals, battle scenes, and town views.

Mapping Vulnerability Jun 25 2022 Raging floods, massive storms and cataclysmic earthquakes: every year up to 340 million people are affected by these and other disasters, which cause loss of life and damage to personal property, agriculture, and infrastructure. So what can be done? The key to understanding the causes of disasters and mitigating their impacts is the concept of 'vulnerability'. Mapping Vulnerability analyses 'vulnerability' as a concept central to the way we understand disasters and their magnitude and impact. Written and edited by a distinguished group of disaster scholars and practitioners, this book is a counterbalance to those technocratic approaches that limit themselves to simply looking at disasters as natural phenomena. Through the notion of vulnerability, the authors stress the importance of social processes and human-environmental interactions as causal agents in the making of disasters. They critically examine what renders communities unsafe - a condition, they argue, that depends primarily on the relative position of advantage or disadvantage that a particular group occupies within a society's social order. The book also looks at vulnerability in terms of its relationship to development and its impact on policy and people's lives, through consideration of selected case studies drawn from Africa, Asia and Latin America. Mapping Vulnerability is essential reading for academics, students, policymakers and practitioners in disaster studies, geography, development studies, economics, environmental studies and sociology.

The Scary Places Map Book May 25 2022 A whimsical tour of seven spooky locations introduces basic map-reading skills and highlights fun-filled "points of interest," from Dracula's Castle to Dr. Frankenstein's laboratory, on maps of such places as the Wicked Woods, a Ghostly Galleon and the Western Terror-tories. Ancient West & East May 01 2020 Originally published as Volume 4 (2005) of Brill's journal "Ancient West & East,"

Mapping Yorùbá Networks Oct 18 2021 Three flags fly in the palace courtyard of Òyótúnjì African Village. One represents black American emancipation from slavery, one black nationalism, and the third the establishment of an ancient Yorùbá Empire in the state of South Carolina. Located sixty-five miles southwest of Charleston, Òyótúnjì is a Yorùbá revivalist community founded in 1970. *Mapping Yorùbá Networks* is an innovative ethnography of Òyótúnjì and a theoretically sophisticated exploration of how Yorùbá òrìsà voodoo religious practices are reworked as expressions of transnational racial politics. Drawing on several years of multisited fieldwork in the United States and Nigeria, Kamari Maxine Clarke describes Òyótúnjì in vivid detail—the physical space, government, rituals, language, and marriage and kinship practices—and explores how ideas of what constitutes the Yorùbá past are constructed. She highlights the connections between contemporary Yorùbá transatlantic religious networks and the post-1970s institutionalization of roots heritage in American social life. Examining how the development of a deterritorialized network of black cultural nationalists became aligned with a lucrative late-twentieth-century roots heritage market, Clarke explores the dynamics of Òyótúnjì Village's religious and tourist economy. She discusses how the community generates income through the sale of prophetic divinatory consultations, African market souvenirs—such as cloth, books, candles, and carvings—and fees for community-based tours and dining services. Clarke accompanied Òyótúnjì villagers to Nigeria, and she describes how these heritage travelers often returned home feeling that despite the separation of their ancestors from Africa as a result of transatlantic slavery, they—more than the Nigerian Yorùbá—are the true claimants to the ancestral history of the Great Òyó Empire of the Yorùbá people. *Mapping Yorùbá Networks* is a unique look at the political economy of homeland identification and the transnational construction and legitimization of ideas such as authenticity, ancestry, blackness, and tradition.

A History of Spaces Jul 15 2021 It also considers the use of maps for military purposes, maps that have coded modern conceptions of health, disease and social character, and maps of the transparent human body and the transparent earth." "The final chapters of the book turn to the rapid pace of change in mapping technologies, the forms of visualization and representation that are now possible, and what the author refers to as 'the possibilities for post-representational cartographies'."--Jacket.

Mapping in the Cloud Sep 04 2020 This engaging text provides a solid introduction to mapmaking in the era of cloud computing. It takes students through both the concepts and technology of modern cartography, geographic information systems (GIS), and Web-based mapping. Conceptual chapters delve into the meaning of maps and how they are developed, covering such topics as map layers, GIS tools, mobile mapping, and map animation. Methods

chapters take a learn-by-doing approach to help students master application programming interfaces and build other technical skills for creating maps and making them available on the Internet. The companion website offers invaluable supplementary materials for instructors and students. ~ ~ Pedagogical features: ~ End-of-chapter summaries, review questions, and exercises. ~ Extensive graphics illustrating the concepts and procedures. Downloadable PowerPoints for each chapter. Downloadable code files (where applicable) for the exercises.

Mapping China's Growth and Development in the Long Run, 221 BC to 2020 Mar 11 2021
The narrative of China's history in this book is 'theme-led' rather than conventionally chronicle-based. It covers China's resource endowments, historical contingencies (such as civil wars, invasions and climate changes) and ideologies (including Legalism, Confucianism, Social Darwinism, nationalism, and Marx-Stalinism) that shaped the particular path of growth and development in China over two millennia. This book aims to take the reader through China's remarkably long and colourful saga of growth and development, full of ups, downs, twists and turns. It shows that China's experience has neither been linear nor trouble-free. China's long-term experience showcases the two fundamentals in growth and development: efficiency and equality. The lesson that one can learn from China's long history is that distributing incomes (equality) is as important as producing them (efficiency). By the same token, to secure growth and development, the political economy of government and governance is as critical in determining growth and development as resource endowments, technology, and market exchanges. This applied to China's past, and will inevitably apply to China's future. Contents: Introduction Size and Longevity of the Empire Empire-building and Empire Maintenance Key Institutions Public Goods Provision Highlights of the Economy of the Empire Growth after the Empire Concluding Remarks Readership: Academics, undergraduate and graduates students, professionals interested in China's economic history, economic performance, growth and development, and the political economy of governance. Keywords: Economic Performance; Growth and Development; The Political Economy of Governance Key Features: The long scope of China's history Unique approach to the subject Rich data from Chinese sources

Science Kids: Maps and Mapping Oct 25 2019 Examines different types of maps and their uses, as well as the practice and history of map making, with projects to allow readers to practice making their own maps.

Mental Maps Mar 30 2020 Published in the year 2004, Mental Maps is a valuable contribution to the field of Geography.

Mapping Detroit Nov 06 2020 One of Detroit's most defining modern characteristics—and most pressing dilemmas—is its huge amount of neglected and vacant land. In Mapping Detroit: Land, Community, and Shaping a City, editors June Manning Thomas and Henco Bekkering use chapters based on a variety of maps to shed light on how Detroit moved from frontier fort to thriving industrial metropolis to today's high-vacancy city. With contributors ranging from a map archivist and a historian to architects, urban designers, and urban planners, Mapping Detroit brings a unique perspective to the historical causes, contemporary effects, and potential future of Detroit's transformed landscape. To show how Detroit arrived

in its present condition, contributors in part 1, Evolving Detroit: Past to Present, trace the city's beginnings as an agricultural, military, and trade outpost and map both its depopulation and attempts at redevelopment. In part 2, Portions of the City, contributors delve into particular land-related systems and neighborhood characteristics that encouraged modern social and economic changes. Part 2 continues by offering case studies of two city neighborhoods—the Brightmoor area and Southwest Detroit—that are struggling to adapt to changing landscapes. In part 3, Understanding Contemporary Space and Potential, contributors consider both the city's ecological assets and its sociological fragmentation to add dimension to the current understanding of its emptiness. The volume's epilogue offers a synopsis of the major points of the 2012 Detroit Future City report, the city's own strategic blueprint for future land use. Mapping Detroit explores not only what happens when a large city loses its main industrial purpose and a major portion of its population but also what future might result from such upheaval. Containing some of the leading voices on Detroit's history and future, Mapping Detroit will be informative reading for anyone interested in urban studies, geography, and recent American history.

The Pentagon's New Map Feb 28 2020 Since the end of the Cold War, America's national security establishment has been searching for a new operating theory to explain how this seemingly "chaotic" world actually works. Gone is the clash of blocs, but replaced by what? Thomas Barnett has the answers. A senior military analyst with the U.S. Naval War College, he has given a constant stream of briefings over the past few years, and particularly since 9/11, to the highest of high-level civilian and military policymakers—and now he gives it to you. The Pentagon's New Map is a cutting-edge approach to globalization that combines security, economic, political, and cultural factors to do no less than predict and explain the nature of war and peace in the twenty-first century. Building on the works of Friedman, Huntington, and Fukuyama, and then taking a leap beyond, Barnett crystallizes recent American military history and strategy, sets the parameters for where our forces will likely be headed in the future, outlines the unique role that America can and will play in establishing international stability—and provides much-needed hope at a crucial yet uncertain time in world history. For anyone seeking to understand the Iraqs, Afghanistans, and Liberias of the present and future, the intimate new links between foreign policy and national security, and the operational realities of the world as it exists today, The Pentagon's New Map is a template, a Rosetta stone. Agree with it, disagree with it, argue with it—there is no book more essential for 2004 and beyond.

The Political Mapping of Cyberspace Apr 11 2021 This book is about the politics of cyberspace. It shows that cyberspace is no mere virtual reality but a rich geography of practices and power relations. Using concepts and methods derived from the work of Michel Foucault, Jeremy Crampton explores the construction of digital subjectivity, web identity and authenticity, as well as the nature and consequences of the digital divide between the connected and those abandoned in limbo. He demonstrates that it is by processes of mapping that we understand cyberspace and in doing so delineates the critical role maps play in constructing cyberspace as an object of knowledge. Maps, he argues, shape political thinking about cyberspace, and he deploys in-depth case studies of crime mapping, security and geo-surveillance to show how we map ourselves onto cyberspace, inexorably and indelibly. Clearly argued and vigorously written this book offers a powerful reinterpretation of cyberspace, politics, and contemporary life.

Mapping Security Oct 30 2022 Compelling and practical view of computer security in a multinational environment – for everyone who does business in more than one country.

*Rhumb Lines and Map Wars Sep 28 2022 In *Rhumb Lines and Map Wars*, Mark Monmonier offers an insightful, richly illustrated account of the controversies surrounding Flemish cartographer Gerard Mercator's legacy. He takes us back to 1569, when Mercator announced a clever method of portraying the earth on a flat surface, creating the first projection to take into account the earth's roundness. As Monmonier shows, mariners benefited most from Mercator's projection, which allowed for easy navigation of the high seas with rhumb lines—clear-cut routes with a constant compass bearing—for true direction. But the projection's popularity among nineteenth-century sailors led to its overuse—often in inappropriate, non-navigational ways—for wall maps, world atlases, and geopolitical propaganda. Because it distorts the proportionate size of countries, the Mercator map was criticized for inflating Europe and North America in a promotion of colonialism. In 1974, German historian Arno Peters proffered his own map, on which countries were ostensibly drawn in true proportion to one another. In the ensuing "map wars" of the 1970s and 1980s, these dueling projections vied for public support—with varying degrees of success. Widely acclaimed for his accessible, intelligent books on maps and mapping, Monmonier here examines the uses and limitations*

of one of cartography's most significant innovations. With informed skepticism, he offers insightful interpretations of why well-intentioned clerics and development advocates rallied around the Peters projection, which flagrantly distorted the shape of Third World nations; why journalists covering the controversy ignored alternative world maps and other key issues; and how a few postmodern writers defended the Peters worldview with a self-serving overstatement of the power of maps. Rhumb Lines and Map Wars is vintage Monmonier: historically rich, beautifully written, and fully engaged with the issues of our time.

Time Maps Jun 01 2020 The pioneering sociologist and author of The Seven Day Circle continues his analysis of time with this fascinating look at history as social construct. Who were the first people to inhabit North America? Does the West Bank belong to the Arabs or the Jews? Why are racists so obsessed with origins? Is a seventh cousin still a cousin? Why do some societies name their children after dead ancestors? As Eviatar Zerubavel demonstrates in Time Maps, we cannot answer burning questions such as these without a deeper understanding of how we envision the past. In a pioneering attempt to map the structure of collective memory, Zerubavel considers the cognitive patterns we use to organize the past and the social grammar of conflicting interpretations of history. Drawing on fascinating examples that range from Hiroshima to the Holocaust, and from ancient Egypt to the former Yugoslavia, Zerubavel shows how we construct historical origins; how we tie discontinuous events together into stories; how we link families and entire nations through genealogies; and how we separate distinct historical periods from one another through watersheds, such as the invention of fire or the fall of the Berlin Wall. "Time Maps extends beyond all of the old clichés about linear, circular, and spiral patterns of historical process and provides us with models of the actual legends used to map history...brilliant and elegant."-Hayden White, University of California, Santa Cruz

Maps of Meaning Oct 06 2020 Why have people from different cultures and eras formulated myths and stories with similar structures? What does this similarity tell us about the mind, morality, and structure of the world itself? From the author of 12 Rules for Life: An Antidote to Chaos comes a provocative hypothesis that explores the connection between what modern

neuropsychology tells us about the brain and what rituals, myths, and religious stories have long narrated. A cutting-edge work that brings together neuropsychology, cognitive science, and Freudian and Jungian approaches to mythology and narrative, Maps of Meaning presents a rich theory that makes the wisdom and meaning of myth accessible to the critical modern mind.

Historical Maps of the Napoleonic Wars Jul 03 2020 A collection of over 100 maps that provide a fascinating insight into the organization of some of the greatest military campaigns in history, including the battles of Trafalgar and Waterloo. Neuroethics May 13 2021 This volume contains the proceedings of a two-day multidisciplinary conference on the ethical implications of brain research organized by Stanford University and the University of California, San Francisco. Leaders in neuroscience, journalism, law, and philosophy, among other fields, engaged in a freewheeling debate on the social and individual effects of the research. Steven Marcus has edited their formal and informal deliberations to present a compelling first-hand account of the proceedings, providing a highly readable front-row seat about the first-ever symposium on neuroethics.

Mapping the Victorian Social Body Mar 23 2022 Explores how medical and social maps helped shape modern perceptions of space.

*Cloud Atlas Jan 27 2020 By the New York Times bestselling author of *The Bone Clocks* | Shortlisted for the Man Booker Prize A postmodern visionary and one of the leading voices in twenty-first-century fiction, David Mitchell combines flat-out adventure, a Nabokovian love of puzzles, a keen eye for character, and a taste for mind-bending, philosophical and scientific speculation in the tradition of Umberto Eco, Haruki Murakami, and Philip K. Dick. The result is brilliantly original fiction as profound as it is playful. In this groundbreaking novel, an influential favorite among a new generation of writers, Mitchell explores with daring artistry fundamental questions of reality and identity. *Cloud Atlas* begins in 1850 with Adam Ewing, an American notary voyaging from the Chatham Isles to his home in California. Along the way, Ewing is befriended by a physician, Dr. Goose, who begins to treat him for a rare species of brain parasite. . . . Abruptly, the action jumps to Belgium in 1931, where Robert Frobisher, a disinherited bisexual composer, contrives his way into the household of an infirm maestro who has a beguiling wife and a nubile daughter. . . . From there we jump to the West Coast in the 1970s and a troubled reporter named Luisa Rey, who stumbles upon a web of corporate greed and murder that threatens to claim her life. . . . And onward, with dazzling virtuosity, to an inglorious present-day England; to a Korean superstate of the near future where neocapitalism has run amok; and, finally, to a postapocalyptic Iron Age Hawaii in the last days of history. But the story doesn't end even there. The narrative then boomerangs back through centuries and space, returning by the same route, in reverse, to its starting point. Along the way, Mitchell reveals how his disparate characters connect, how their fates intertwine, and how their souls drift across time like clouds across the sky. As wild as a videogame, as mysterious as a Zen koan, *Cloud Atlas* is an unforgettable tour de force that, like its incomparable author, has transcended its cult classic status to become a*

worldwide phenomenon. Praise for Cloud Atlas “[David] Mitchell is, clearly, a genius. He writes as though at the helm of some perpetual dream machine, can evidently do anything, and his ambition is written in magma across this novel’s every page.”—The New York Times Book Review “One of those how-the-holy-hell-did-he-do-it? modern classics that no doubt is—and should be—read by any student of contemporary literature.”—Dave Eggers “Wildly entertaining . . . a head rush, both action-packed and chillingly ruminative.”—People “The novel as series of nested dolls or Chinese boxes, a puzzle-book, and yet—not just dazzling, amusing, or clever but heartbreaking and passionate, too. I’ve never read anything quite like it, and I’m grateful to have lived, for a while, in all its many worlds.”—Michael Chabon “Cloud Atlas ought to make [Mitchell] famous on both sides of the Atlantic as a writer whose fearlessness is matched by his talent.”—The Washington Post Book World “Thrilling . . . One of the biggest joys in Cloud Atlas is watching Mitchell sashay from genre to genre without a hitch in his dance step.”—Boston Sunday Globe “Grand and elaborate . . . [Mitchell] creates a world and language at once foreign and strange, yet strikingly familiar and intimate.”—Los Angeles Times

How Maps Work Aug 28 2022 Now available in paperback for the first time, this classic work presents a cognitive-semiotic framework for understanding how maps work as powerful, abstract, and synthetic spatial representations. Explored are the ways in which the many representational choices inherent in mapping interact with information processing and knowledge construction, and how the resulting insights can be used to make informed symbolization and design decisions. A new preface to the paperback edition situates the book within the context of contemporary technologies. As the nature of maps continues to evolve, Alan MacEachren emphasizes the ongoing need to think systematically about the ways people interact with and use spatial information.
