This book is designed as a guide for management of advanced clinical scenarios encountered by the contemporary pelvic floor surgeon. It is organized by pelvic floor disorder (PFD) and covers the evaluation and treatment of urinary incontinence, fecal incontinence, and pelvic organ prolapse. Opening chapters in each section cover the fundamentals of proper and comprehensive assessment of patient PFDs, as well as the treatment options that are available for each disorder. The book then focuses on more complex and challenging situations that are becoming more frequently encountered as the number of patients being treated for PFD increases and the length of patient follow-up grows. Each chapter finally includes an expert commentary to address these new scenarios and offers a shifted approach from that required for treatment-naïve patients. *Female Pelvic Medicine: Challenging Cases with Expert Commentary* teaches the reader how to approach the most difficult of clinical

situations in a multidisciplinary fashion. Rev. ed. of: First aid/CPR/AED for schools and the community. 3rd ed. c2006. First published in 1975. "Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The

aims of International perspectives on spinal cord injury are to: ---assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; ---make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.
